PennHIP Report

Referring Veterinarian: Dr David Johnson
Email: Blairsmallanimalclinic@gocom.net

Clinic Name: Blair Small Animal Clinic PC
Clinic Address: 1734 Front Street
Blair, NE 68008
Phone:
Fax: (402) 533-2723

Patient Information

Client: Gosch, Marc D
Patient Name: Coco
Reg. Name: GOSCH'S VIOLA
PennHIP Num: 189446
Species: Canine
Date of Birth: 10 Mar 2022
Sex: Female
Date of Study: 25 May 2023
Date of Report: 06 Jun 2023

Tattoo Num:
Patient ID: SM-006262
Registration Num: SM-006262
Microchip Num: 933000320673128
Breed: SMALL MUNSTERLANDER
Age: 14 months
Weight: 29.7 lbs/13.5 kgs
Date Submitted: 25 May 2023

Findings

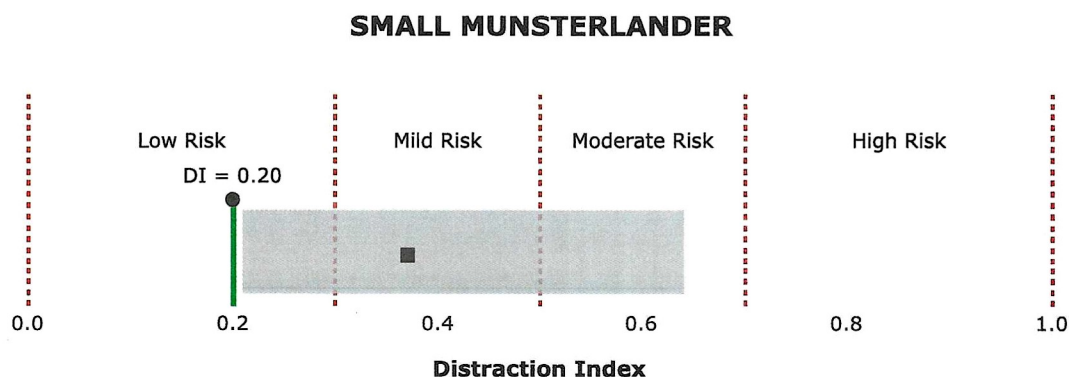

Distraction Index (DI): Right DI = 0.15, Left DI = 0.20.
Osteoarthritis (OA): **No radiographic evidence of OA for either hip.**
Cavitation/Other Findings: No cavitation present.

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.20.

OA Risk Category: The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA.

Distraction Index Chart:

BREED STATISTICS: This interpretation is based on a cross-section of 384 canine patients of the SMALL MUNSTERLANDER breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.21 - 0.64) for the breed. The breed average DI is 0.37 (solid square). The patient DI is the solid circle (0.20).

SUMMARY: The degree of laxity (DI = 0.20) ranks the hip within the tightest 5% of DIs for the breed. This amount of hip laxity places the hip at a minimal risk to develop hip OA. **No radiographic evidence of OA for either hip.**

INTERPRETATION AND RECOMMENDATIONS: No OA/Minimal Risk: Unlikely to show radiographic evidence of hip OA; even more unlikely to develop clinical signs of hip dysplasia. **Recommendations:** Normal to strenuous activity is permitted. Keep lean: try to maintain BCS at 5/9 for a longer and healthier life. **Breeding Recommendations:** Please Consult the PennHIP Manual.

COMMENTS:

Note: name is spelled VOILA on images.

Please inform the owners that when the Distraction Index is at or below 0.30 we recommend repeating at some later date (prior to breeding) in order to confirm that the hips are this tight.

We recommend to you, the PennHIP Member, that when the hips appear tight to your eye on future cases, repeat the distraction view at the time of the study to confirm the finding. First, check that the anesthesia is providing sufficient relaxation by a deep toe-pinch [which should not elicit a withdrawal response]. Send both distraction views to us (or all, if more than two are taken).
